

**A deepfake can fake your
face.**
It can't fake your phone.

Proofprint checks the phone, not just the face

Light

The screen flashes a random colour sequence. Real skin reflects it. A recording can't.

Phone move

The picture must move exactly as the gyroscope says the phone moved.

Profile turn

Turn to the side we pick, live. Face-swaps fall apart at a full profile.

Capture integrity

Injected video and missing sensors are spotted before anything else runs.

Scan for the brief

One page: the attack, the checks, the demo
